Hip Dysplasia International Symposium

SOLVING A WORLDWIDE PUBLIC HEALTH CRISIS

September 13–14, 2018

COURSE DESCRIPTION

This two-day symposium will highlight the major challenges facing providers who deal with patients who have hip dysplasia by using a case based approach to common problems. Attendees will learn the fundamentals of ultrasound enhanced physical exam of the infant hip, strategies to improve the non-operative treatment, as well as the basics of when surgery is needed and how outcomes can be improved. Day one will present the fundamentals and day two will be dedicated to higher level discussion of controversies in hip dysplasia.
